

The Martian Dust Devils

A dust devil spins across the surface of Gusev Crater just before noon on Mars.

NASA's Spirit rover took the series of images with its navigation camera on the rover's martian day, or sol, 486 (March 15, 2005).

The images were taken at:

11:48:00 (T=top)
11:49:00 (M=middle)
11:49:40 (B=bottom)

based upon local Mars time.

The dust devil was about 1.0 kilometer from the rover at the start of the sequence of images on the slopes of the "Columbia Hills."

Problem 1 - At the distance of the dust devil, the scale of the image is 7.4 meters/millimeter. How far did the dust devil travel between the top (T) and bottom (B) frames?

Problem 2 - What was the time difference, in seconds, between the images T-M, M-B and T-B?

Problem 3 - What was the distance, in meters, traveled between the images T-M and M-B?

Problem 4 - What was the average speed, in meters/sec, of the dust devil between T-B?

Problem 5 - What were the speeds during the interval from T-M, and the interval M-B?

Problem 6 - Was the dust devil accelerating or decelerating between the times represented by T-B?

Answer Key

2

Problem 1 - At the distance of the dust devil, the scale of the image is 7.4 meters/millimeter. How far did the dust devil travel between the top and bottom frames? **Answer: The location of the dust devil in frame B when placed in image T is a shift of about 65 millimeters, which at a scale of 7.4 meters/mm equals about 480 meters.**

Problem 2 - What was the time difference between the images T-M, M-B and T-B? **Answer: T-M = 11:49:00 - 11:48:00 - 1 minute or 60 seconds. For M-B the time interval is 40 seconds. For T-B the time interval is 100 seconds.**

Problem 3 - What was the distance traveled between the images T-M and M-B? **Answer: T-M = about 30 mm or 222 meters; M-B = about 35 mm or 259 meters.**

Problem 4 - What was the average speed, in meters/sec, of the dust devil between T-B? **Answer: Speed = distance/time so 480 meters/100 seconds = 4.8 meters/sec.**

Problem 5 - What were the speeds during the interval from T-M, and the interval M-B? **Answer: Speed(T-M) = 222 meters/60 seconds = 3.7 meters/sec. Speed(M-B) = 259 meters/40 seconds = 6.5 meters/sec.**

Problem 6 - Was the dust devil accelerating or decelerating between the times represented by T-B? **Answer: because the speed increased from 4.8 meters/sec to 6.5 meters/sec, the dust devil was accelerating during this time interval from 11:48:00 to 11:49:40.**
